WARNING ABOUT SMART METERS

There are individuals that have had their desks, beds, and sitting areas on the other side of a wall from the SMART METERS on the electrical panel installed by your electric company. No one would listen to many “warnings” of the invisible **Electro Magnetic Frequency (dirty electricity)** emitting from these devices. Too many were in awe and amazement of this “new” technology and warnings were ignored.

Dr. Daniel Pompa has recently been describing the **research** he has done in regard to SMART METERS. He had his desk next to a wall. On the other side of that wall was a SMART METER, he finally realized the reason for his headaches. (Just **one of many symptoms** attached to these SMART METERS)

What is even more disturbing is why some homes are burning up inside. SMART METERS have lithium batteries. Something happens called THERMAL RUNAWAY. **A lithium battery heats up fast, it goes from 140 degrees to 6,000 degrees.** The copper wires are connected to the SMART METERS and the copper wires run through the home and light up the house burning from the **inside out!** Other researchers found that SMART METER'S BYPASS the ELECTRICAL panels that protect circuits from overload, ensuring **safe flow** of power.

Why are the California fires not burning trees? Think about the explosive heat running through your home's walls burning the inside, leaving trees and trash cans standing on the outside. Why?

We have the knowledge, and we should notify the electric company to convert our SMART METER to the good old-fashioned ANALOG METER for an additional fee (\$10.00) a month to read the meter.

Health risk and Property Risk? So, the extra expense of having a person (meter reader) reading meters has us acting on research.

Don't believe us do your own research!

Many of us will be notifying the electric company to convert our meter back to the good old-fashioned ANALOG for an additional fee (\$10.00) to read the meter.

Go to this website called smartmetereducationnetwork.com

It will show you pictures of what SMART METERS actually look like to compare. You have the **RIGHT** to demand an old ANALOG METER.

Now we need to do it to prevent fires but more importantly it puts off dirty electricity and it puts off a frequency that our bodies can't stand.

Got to make sure these things are away from you, just replace them **PERIOD!**

All things hidden shall be revealed. God Speed!
